The invention relates to AgrD derived peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus.

The present invention also describes a method for treati Staphylococcus aureus infection comprising the administration of a composition comprising (I). (I) has antibacterial activity, and can used as an agr gene response inhibitor. The peptides are useful for treating S. aureus infections.

The present sequence is that of a novel synthetic cyclic peptide of the invention that is capable of inhibiting the agr response of Staphylococcus aureus. It is an AgrD-autoinducing peptide, where AgrD is a secreted agr-encoded peptide and where the agr locus controls the synthesis of printlence factor and other extracellular proteins responsible for printlence factor and other extracellular peptides may have the sequence NH2-X(n)-Z-X(y)-COOH, with a cyclic bond between the Z residue and COOH other than a thioester

Elimination of the thiol ester component of the cyclic ring structure can destroy agr response activating activity while preserving and enhancing inhibitory activity. A claimed method of preparing a cyclic peptide involves: assembling a linear peptide chain on to a solid phase resin support; deprotecting the resulting protected assembled peptide, treating the deprotected peptide with neutral buffer for a time sufficient to form the cyclic peptide and cleave the peptide from the support, and recovering the cyclic peptide. The peptide is useful for
                This sequence represents the Staphylococcus aureus AgrDII derived peptide. The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Muir

                                                                                                                                                                              This sequence represents the Staphylococcus aureus AgrDII derived peptide. The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Staphylococcus aureus infection; AgrD; agr response; treatment; virulence factor.

The present sequence is that of a protected peptide used in an example of the preparation of novel synthetic cyclic peptides of the invention (see AAM50899-906). The peptide corresponds to the Staphylococcus aureus AgrDII sequence with a Cys5 to Ser mutation (lactorie). It was synthesised on a Wang-resin using an Fmoc N-alpha protection strategy. Following chain assembly, the peptide was cleaved from the support and the Ser-5 residue deprotected by treatment with a trifluoroacetic acid:anisole:water mixture (90:5:5) for 4 hr. The partially protected peptide-alpha carboxylates were then dissolved in DMF and treated with PyBOP and a catalytic amount of dimethylaminopyridine. Cyclization was complete after 2 hr. The remaining protecting groups were then removed by treatment with HF and the peptide by HPIC. The cyclic peptide is capable of inhibiting the agr response of Staphylococcus aureus. The thiololactone structure within native AgrD paptides is required for activation of this response. Replacement of the thiol ester component of the cyclic ring can destroy agr response activating activity while preserving and enhancing inhibitory activity. The cyclic peptides are useful for infactorial interference, especially for the treatment of S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Staphylococcus aureus; AgrD; agr response; inhibitor; antibiotic; antibacterial; infection; therapy; cyclic.

The present sequence is that of a novel synthetic AgrD2 linear thioester peptide. The peptide is derived from the cyclic AgrD2 peptide of Staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agrB3 containing a beta-lactamase reporter gene fused to the agrB3 containing a beta-lactamase reporter gene fused to the agrB3 containing a beta-lactamase reporter gene fused to the agrB3 containing a beta-lactamase reporter gene fused to the agrB3 containing a beta-lactamase reporter gene fused to the agrB3 containing a beta-lactamase reporter gene fused to the agrB3 containing a beta-lactamase reporter gene fused to the agrB3 containing a beta-lactamase reporter gene fused to the agrB3 containing a beta-lactamase reporter gene fused to the agrB3 containing a beta-lactamase reporter gene fused to the agrB3 containing a beta-lactamase reporter gene fused to the agrB3 containing a beta-lactamase reporter gene fused to the agrB3 containing the analysis of the present peptide was unable to cultured cells at uM concentrations. The invention provides claimed cyclic peptides (see AAMS10899-906 and AAMS1099) cand methods for preparing them. The cyclic peptides are useful for infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

The peptide is derived from the cyclic AgrP2 copeptide of Staphylococcus aureus group II. AgrP2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains controlining a beta-lactamase reporter gene fused to the agrP3 containing a beta-lactamase reporter response to be monitored spectrophotometrically. Unlike an AgrD2 response to be monitored spectrophotometrically. Unlike an AgrD2 thiololatione cyclic peptide (see AMM51001), the present peptide was unable to either activate or inhibit the agr response, even when added to cultured cells at uM concentrations. The invention provides claimed cyclic peptides (see AMM5099) 906 and AMM5099)

C and methods for preparing them. The cyclic peptides are useful for bacterial interference, especially for the treatment of S. aureus
                                                                                                          Query Match

                                                                                                                     The present sequence is that of a novel synthetic AgrD2 lactone cyclic peptide in which residue 5 of the peptide is linked to residue 9 via a lactone bond. The peptide is derived from an AgrD2 peptide of Staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological cativity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agrP3 promoter. This allowed activation or inhibition of the agr response to be monitored spectrophotometrically. The lactone AgrD2 peptide inhibited the agr response of group I S. aureus strains without activating the agr response in group I. I or III strains without activating the agr response in group I. I or III especially peptides where the cyclic bond is a lactam or lactone bond. The cyclic peptides are useful for bacterial interference, cespecially for the treatment of S. aureus infection.

                                                                                                                                                                          皮
                                                                                                                                                                                                  Ş
                                                                                                                                                                                                                                                                                                                   comprising inhibitors of the quorum-sensing pathway of a microorganism are also provided. Methods using such AI-2 analogues are useful for treating pathogen-associated disease states. The compounds and antibiotic compositions can be used to inhibit bacterial cell growth and/or biofilm formation on a medical device, particularly for promoting growth of skin graft replacements used in the treatment of burns and ulcers. They may also be used to aid wound repair, and to inhibit bacterial cell growth and biofilm formation in or on products or devices used for personal hygiene. The present sequence represents a inhibitor of peptide-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Use of autoinducer-2 agonists or antagonists autoinducer-2 receptor, regulating bacterial also antibiotic compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to the use of autoinducer-2 (AI-2) agonists or antagonists for regulating activity of autoinducer-2 receptor, regulating bacterial growth and pathogenesis. Synergistic antibiotic compositions
  Staphylococcus aureus infection; cyclic
                          S. aureus peptide #1 used for bacterial interference.
                                                                                                                                                                                                                                                                                Sequence

The invention relates to AgrD derived peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus.

The invention relates to AgrD derived cyclic peptides; a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Muir

The present invention also describes a method for treating Staphylococcus aureus infection comprising the administration of a composition comprising (I). (I) has antibacterial activity, and can be used as an agr gene response inhibitor. The peptides are useful for treating S. aureus infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New cyclic infections

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cyclic bond between the Z residue and COOH other than a thioester bond, where X is an amino acid, an amino acid analogue, a peptidomimetic or non-amide isostere, Z is a synthetic or a peptidomimetic or non-amide isostere, Z is a synthetic or a peptidomimetic or non-amide isostere, Z is a synthetic or a biosynthetic anino acid, n is 0-10 and y is 1-10. The cyclic bond is especially a lactam or lactone bond. The thiololactone structure within native AgrD peptides is required for activation of the agr response. Elimination of the thiol ester component of the cyclic ring structure can destroy agr response activating activity while preserving and enhancing inhibitory activity. A claimed method of preparring a cyclic peptide involves: assembling a linear peptide chain on to a solid phase resin support; deprotected peptide with neutral buffer for a time sufficient to form the cyclic peptide and cleave the peptide from the support; and recovering the cyclic peptide. The peptide is useful for another than activity activity and recovering the cyclic peptide. The peptide is useful for another than activity activity as a solid phase resin support; and recovering the cyclic peptide. The peptide is useful for another than activity activity activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                       Staphylococcus aureus AgrDII sequence with a Cys5 to diaminopropionic cardid (Dpr) mutation (lactam). It was synthesised on a Wang-resin cu using an Fmoc N-alpha protection strategy. Following chain assembly, the peptide was cleaved from the support and the Dpr-5 residue deprotected by treatment with a trifluoroacetic acid.anisole:water carboxylates were then dissolved in DMF and treated with PyBOP. Cyclization was complete after 2 hr. The partially protected peptide-alpha carboxylates were then dissolved in DMF and treated with PyBOP. Cyclization was complete after 2 hr. The remaining protecting groups were removed by treatment with HF and the peptide purified by HPIC. The cyclic peptide is capable of inhibiting the agr response of staphylococcus aureus. The thiololactone structure within native AgrD peptides is required for activation of this response. Replacement of the thiol ester component of the cyclic ring structure with a lactam (as in the present case) or a lactone can destroy agr response activating activity while preserving and considered interference, especially for the treatment of S. aureus

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    protein search, using sw

FUNCTION: COMPONENT OF THE COPIT COAT, THAT COVERS ER-DERIVED FUNCTION: COMPONENT OF THE COPIT END THE ENDOPLASMIC RETICULUM TO THE GOLGI APPARATUS. COPII ACTS IN THE CYTOPLASM TO PROMOTE THE TRANSPORT OF SECRETORY, PLASMA MEMBRANE, AND VACUOLAR PROTEINS FROM THE ENDOPLASMIC RETICULUM TO THE GOLGI COMPLEX.

SUBUNIT: COPII IS COMPOSED OF AT LEAST FIVE PROTEINS: THE SEC23/24 COMPLEX, THE SEC13/31 COMPLEX AND SAIL (By Similarity).

SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

SIMILARITY: BELONGS TO THE SEC23/SEC24 FAMILY. SEC24 SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               477

"Nucleotide sequence of a maize cDNA coding for a light-harvesting rehlorophyll ab binding protein of photosystem II.";

L Nucleic Acids Res. 18:719-7179(1990).

C -!- FUNCTION: THE LIGHT-HARVESTING COMPLEX (LHC) FUNCTIONS AS A LIGHT RECEPTOR, IT CAPTURES & DELIVERS EXCITATION ENERGY TO PHOTOSYSTEMS WITH WHICH IT IS CLOSELY ASSOCIATED. THE N-TERMINUS OF THE PROTEIN CETTENUS INTO THE STROMA WHERE IT IS INVOLVED WITH ADHESION OF EXTENUS INTO THE STROMA WHERE IT IS INVOLVED WITH ADHESION OF CORANAL MEMBRANES AND PHOTOREGULATED BY REVERSIBLE PHOSPHORYLATION OF ITS THREONINE RESIDUES; BOTH ARE BELLEVED TO MEDIATE THE DISTRIBUTION OF EXCITATION ENERGY BETWEEN PHOTOSYSTEMS I AND INSTRUMENTIAL A-B BINDING PROTEINS.

C -!- SUBUNIT: THE LHC COMPLEX CONSISTS OF CHLOROPHYLLS (A & B) AND CHLOROPHYLL A-B BINDING PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SEQUENCE FROM N.A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NCBI_TaxID=4932;
SUBURNIT: INA polymerase III contains a core (composed of alpha, epsilon and theta chains) that associates with a tau subunit. To core dimerizes to form the POLIII' complex. PolIII' associates with the gamma complex (composed of gamma, delta, delta', psi a chi chains) and with the beta chain to form the complete DNA polymerase III complex (By similarity).

SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
                                                                                                                                                                                                                                      FUNCTION: DNA POLYMERASE III IS A COMPLEX, MULTICHAIN ENZYME RESPONSIBLE FOR MOST OF THE REPLICATIVE SYNTHESIS IN BACTERIA. THIS DNA POLYMERASE ALSO EXHIBITS 3' TO 5' EXONUCLEASE ACTIVITY. THE ALPHA CHAIN IS THE DNA POLYMERASE (BY SIMILARITY). CATALYTIC ACTIVITY: N deoxynucleoside triphosphate = N diphosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CAMJE
